## Hosting Solutions

### Target group

Our provider offer addresses companies requiring professional and individually serviced web hosting solutions: thus, maximum system performance and 100 % personal servicing.

### System basis

Our server location is London. Our dedicated server configuration is based on the Redhat Enterprise Linux 5 operating system and next to a solid performance it offers daily security updates and patches. We guarantee 100 % network availability due to our "Tier 2 Backbone" and 24 hr. backups of all your vital server data.

### Benefit

The communautic® "Hosting Solutions" offer company specific hosting configurations and facilitates , at the same time, cost relevant "integral solutions". We reach our top servicing (1:1 support of each single customer) because we offer limited provider services, i.e. through a fixed upper limit of number of customers. This guarantees personal service contact as well as ideal system performance at the same time. All data and system solutions are self-maintainable and configurable (e.g. own setup and maintenance of e-mail accounts, SPAM-filtration, amongst others). A bonus of two free hosting months are offered for each new joining and you can, with immediate effect, benefit from our offer respectively, we will charge our services not until expiration of your old contracts (no double charge; max. 6 months).
